Kansas Hay Market Report

Ground/Grinding alfalfa movement:    Southwest/South Central  
Tonnage: 7,782/4,931      Last week: 8,577/5,332    Last year: 7,317/6,081

Hay market trade slow; Prices steady; demand light to moderate. It certainly has been a wild ride recently. As one producer stated, "we are in uncharted territory". Several outside influences are applying pressure to the hay market currently and include freezing temperatures, insect damage, ethanol plant slowdowns or closers, low corn prices and it's use as a feed source to grinder hay. Producers report that some are shipping more hay, some are shipping less; some want to raise price, and some want to lower price, and it all leaves you scratching your head. Discussion of new crop pricing are starting to get reported, primarily in the southwest, and seem to be starting where old crop left off. The upside, warmer temperatures and sunny skies will allow a lot of planting to get done and get the summer grass to growing. According to the U.S. Drought Monitor, a new area of abnormally dry conditions was introduced in portions of northern and southern Kansas. The dry areas are being discussed extensively by the local experts, who are monitoring the situation closely. Abnormal dryness (D0) increased to 16 pct, moderate drought (D1) remained steady at 4 pct, and severe drought (D2) increased to almost 3 pct. If you have any extra hay to sell and/or need hay here in Kansas, use the services of the Internet Hay Exchange: [www.hayexchange.com/ks.php](http://www.hayexchange.com/ks.php).
